OBJECTIVE

I am a 3rd year Bachelor of Science in Computer Science student majoring in Data Science at the University of Southeastern Philippines, College of Information and Computing. I am seeking an internship opportunity where I can apply my skills in data science, machine learning, and software development in a real world setting. I am eager to learn, contribute, and grow alongside the people I work with.

EDUCATION

Bachelor of Science in Computer Science (Major in Data Science)

University of Southeastern Philippines - College of Information and Computing
August 2023 – Present
Expected Graduation: 2027

TECHNICAL SKILLS

Programming Languages: Python, R, JavaScript, Java

Web Development: React, Node.js, Express.js, HTML, CSS, Tailwind CSS

Database: MongoDB, MySQL

Data Science and ML Tools: RapidMiner, TensorFlow, scikit-learn, pandas, NumPy, Recharts, Python, R

Other Tools: Git, GitHub, Vite, Framer Motion, Flask, EasyOCR

PROJECTS

Project PAMANA – Group Research Project

A machine learning and deep learning study for recognizing traditional Philippine aerophones such as the Bali-ing, Kalaleng, Suling, and Ongiyung through audio classification. Submitted for journal publication to Studies in Digital Heritage.

Tools used: Python, TensorFlow, scikit-learn, CNN, CRNN, Random Forest, SVM

Project T.O.K.H.A.N.G. – Group Research Project

A social network analysis study that mapped patterns of violence in the Philippine Drug War using real data. Deployed as a React web presentation on GitHub Pages.

Tools used: R, igraph, React, GitHub Pages

Formula DC-1 – Personal Project

A data driven Formula 1 web dashboard that visualizes race data, tracks driver performance, and applies machine learning to predict podium outcomes and detect lap anomalies. Features driver clustering using KMeans, lap anomaly detection using Isolation Forest, and podium prediction using Random Forest. Includes 3D car visualizations and a live season tracker.

Tools used: React, Vite, Tailwind CSS, D3.js, Recharts, Three.js, Python, Pandas, NumPy, scikit-learn

Starbucks Transaction Dashboard – Group Project

A data visualization dashboard titled "One Cup. 100,000 Stories" built on 100,000 Starbucks transactions with a cinematic scroll presentation.

Tools used: React, TypeScript, Recharts, GitHub Pages

Know-Ta! – Group Research Proposal

A dual branch deep learning system for detecting AI generated music using EfficientNet-B0, Bi-LSTM, and attention fusion with Bayesian uncertainty estimation.

Tools used: Python, TensorFlow, MC Dropout

F1 Constructor Network Analysis – Academic Project

A social network analysis of Formula 1 constructor relationships based on shared drivers across the 2010 to 2020 seasons.

Tools used: R, statnet, sna

EDM Study: Screen Time and AI Utility on Academic Retention – Group Research Project

An educational data mining study using decision tree, random forest, neural network, and K-Means clustering on an 8,000 student dataset.

Tools used: RapidMiner, Kaggle dataset

Project Race BiB – Personal Project

An automated race bib generator built for fun runs and marathons. It generates names and number bibs for participants and is deployed as a live web application.

Tools used: React, Vite, JavaScript, Vercel

Project G-Cash Visualization – Academic Project

An interactive business intelligence dashboard that visualizes insights from GCash Google Play reviews from 2012 to 2023. Features include sentiment analysis, word cloud generation, linear regression modeling, and a keyword search tool for filtering customer feedback.

Tools used: Python, Flask, TailwindCSS, Plotly, Pandas, NumPy

Grado ni Yano – Personal Project

A mobile responsive GWA calculator web application designed specifically for University of Southeastern Philippines students. Supports pre-loaded curriculums across multiple colleges including CIC, Engineering, CAS, Education, and CBA with real time grade computation.

Tools used: React, Vite, JavaScript, CSS, Vercel

Project Kepler – Academic Project

A deep learning study that classifies Kepler Objects of Interest from NASA's Kepler Space Telescope dataset to determine whether a detected

object is a confirmed exoplanet, a likely candidate, or a false positive. Achieved approximately 83% validation accuracy using a Feed-Forward Neural Network with early stopping.

Tools used: Python, TensorFlow, Keras, Pandas, NumPy, scikit-learn, Matplotlib, Seaborn

USeP Developer Student Community Website – Community Project

Developed the official Developer Student Community USeP Obrero website as part of the DSC team. The site serves as the public face of the organization.

Tools used: TypeScript, CSS, Netlify

Project ReLumina – Personal Project

A blockchain based transparent disaster relief platform that tracks and distributes aid using Web3 principles to ensure accountability and transparency in relief operations.

Tools used: React, TypeScript, Vite, Vercel

SMLS-SFMS: Faculty Management System – Group Project

A full stack faculty management system built for San Pedro College Davao that handles faculty profiles, CV management, specializations, course assignments, and admin approval workflows. Features role based access for both faculty and administrators with secure authentication and in-app notifications.

Tools used: Next.js, TypeScript, Prisma, SQLite, NextAuth.js, Tailwind CSS

Project Iskor App – Personal Project

A simple and user-friendly sports scoring tool designed for anyone from event organizers to casual players. It allows users to manually score games while following official rules.

Tools used: TypeScript

CERTIFICATIONS AND TRAININGS

Pre-Deployment Orientation Seminar for OJT – June 19, 2025

Data Science and Machine Learning

Machine Learning: An Overview – **Politecnico di Milano via Coursera**, August 2024

Data Science in Real Life – **The Johns Hopkins University via Coursera**, August 2024

Machine Learning 101: Demystifying the Magic – **Xaltius Academy**, August 2024

Introduction to Data Science in Python – **University of Michigan via Coursera**, August 2024

Introduction to Data Science – **Cisco**, June 2024

Foundations: Data, Data, Everywhere – **Google via Coursera**, June 2024

Ask Questions to Make Data Driven Decisions – **Google via Coursera**, June 2024

Prepare Data for Exploration – **Google via Coursera**, July 2024

Technology and Security

- Securing Data: A Guide to Microsoft DLP – **Styava.dev**, August 2024
- Google I/O Extended Davao 2024 – **Google Developer Groups Davao**, July 2024
- OpenxAI Vibe Coding Session – **OpenxAI x Davao DeFi Community**, September 2025
- Team1 Avalanche Academy Workshop: Fundamentals Session 1 – **AvaxTeam1 Philippines**, October 2025
- Blockchain Campus Conference 2024 – **The Blocklabs Inc. and Superteam Philippines**, October 2024

Research and Academic Development

- Trends in Open Research: What's Shaping the Future – **Wiley Customer Education**, April 2026
- AI Tools for Writing and Research – **Wiley Customer Education**, March 2026
- Promoting Your Article: Social Media and Web Tools – **Wiley Customer Education**, February 2026

Leadership and Community

- NASA International Space Apps Challenge 2025** – Galactic Team Member, October 2025
- KadaKamp Leadership Program** – KadaKareer x Davao Interschool Computer Enthusiasts, November 2025
- ImpactOS Lead the SHIFT** – KadaKareer, 2025

EXTRACURRICULAR ACTIVITIES AND AFFILIATIONS

- Lead**, Developer Student Community (DSC) USeP Obrero Organized tech events, learning sessions, and community initiatives including the USeP Yano Game Jam 2026 and CCommuniFest 2026.
- Co-Lead**, DSC x Amazon Learning Club Supported cloud learning activities and student engagement in collaboration with Amazon programs.
- KadaCareer Hub Leader**, KadaCareer Davao Del Sur Guided students in career readiness and professional development activities.
- Founder**, DevChain Diaries A Davao-based Web3 podcast and education brand producing content across Facebook, YouTube, TikTok, and Spotify aimed at making blockchain topics accessible to Filipino beginners.
